

Updated Learning Teams

(Deliverable No. 11 First Mile Phase 2, IFAD-Agridea)

Introduction

Over the last year the number of local learners in Tanzania registered on the LLL service has remained fairly constant at seventy four. Over this period we have seen some of the Districts no longer supported by AMSDP dropped and new districts like Siha, Monduli and Karogwe added.

Updates

Responding to user feedback we now show what category each user is in. This helps users find their peers in different districts. Categories include members of the National Marketing Companies and AMSDP mentors. Those who are either in registered MACs or in the process of setting up their MACs are indicated. Clients include farmer groups as well as buyers and processors. Lastly we use a supporter category for all those who are committed to supporting the development of MACs either nationally or at the district level. This category is large because of the support we are getting from district councils and NGO's working in AMSDP and ASDP projects. The current breakdown of registered learners in each category is as follows:

Market Access Companies = 26

Supporters = 40

Clients = 5

National Marketing Company and AMSDP mentors = 4

Learners have also told us that they would like to have the mobile phone numbers in the contact details as this is the most common and easiest way to get in touch and follow up with each other. New members are now registered by national market companies and AMSDP mentors as local learners become an important part of their business directory of contacts. Learners in Tanzania have requested contact details of local learning in Kenyan and Uganda as exchanges on common interests in starting MACs and developing income streams in selling market intelligence and deal making are becoming more and more useful to them. Directories for the learners in Kenya and Uganda can be found in Annex A and B respectively. The newly updated directory for Tanzania organized by districts showing categories and mobile phone numbers follows:

Conclusion

In conclusion based on the last twelve months experience recommends that

- National companies responsible for identifying and registering new MACs and Information board managers to the learning teams.
- Collaborating partners from other IFAD projects and the Tanzanian Agricultural Partnership to be registered as supporters on the learning teams.
- Regular follow up to be made with learners not sharing on the teams to remove those no longer interested to share experiences or ideas.
- Continue to change directory in response to user feedback.
